

Preserve resources with manageable video storage

Video captures behavior that can be far more meaningful than the written testimony. Unfortunately, highly influential testimony can be caught on video but **not be easily accessible to the people who need it** – even if the video has been synchronized to the transcript.

LiveNote™ Remote Video Sharing frees video files from the confines of DVDs, CD-ROMs, and multiple in-firm servers, and hosts them in a secure, central repository, thus alleviating the network burden and administrative hassles experienced when managing video files. LiveNote Remote Video Sharing can be linked to cases managed in LiveNote or West Case Notebook™ software.

Key advantages:

- Large video files no longer consume valuable server space and network bandwidth
- No need to search through DVDs or networks to locate a video file
- Video can be viewed from the office, home, or on the road
- Video is linked to LiveNote or Case Notebook cases
- Video can be shared among attorneys and paralegals in any office
- Users can create self-standing video clips and PowerPoint slides with just a few clicks
- Video is presented in .wmv format for quality streaming and playback

Available with:

- LiveNote SR Version 10
- West LiveNote Version 1
- West Case Notebook

Significant Savings

By centralizing video storage, LiveNote Remote Video Sharing reduces the resource drain caused by end users saving redundant copies to their local machines, duplicating DVDs to ship to remote team members, and/or overtaxing network bandwidth to play video. The file resides on LiveNote Remote Video Sharing, enabling unlimited access via standard Internet connectivity. As a result, you easily conserve bandwidth and gain control of your network.

Easily Accessible Video

LiveNote Remote Video Sharing is completely transparent to end users. They simply select a transcript in LiveNote or West Case Notebook and click the **Play Video** button to view the corresponding video. LiveNote Remote Video Sharing provides the entire team – no matter their location – equally convenient playback of video.

Seamless Clip Creation – Integrated with PowerPoint

Used in conjunction with LiveNote SR™ Version 10, West LiveNote Version 1, or West Case Notebook, Remote Video Sharing lets users create self-standing video clips without requiring a local copy of the source video. Users can also create PowerPoint® slides directly from LiveNote or West Case Notebook, preformatted with the text appearing alongside the video clip. Displaying powerful video evidence at settlement conferences, war-room strategy sessions, and client update meetings has never been easier or more cost-efficient.

Value-added services to help you capitalize on LiveNote Remote Video Sharing

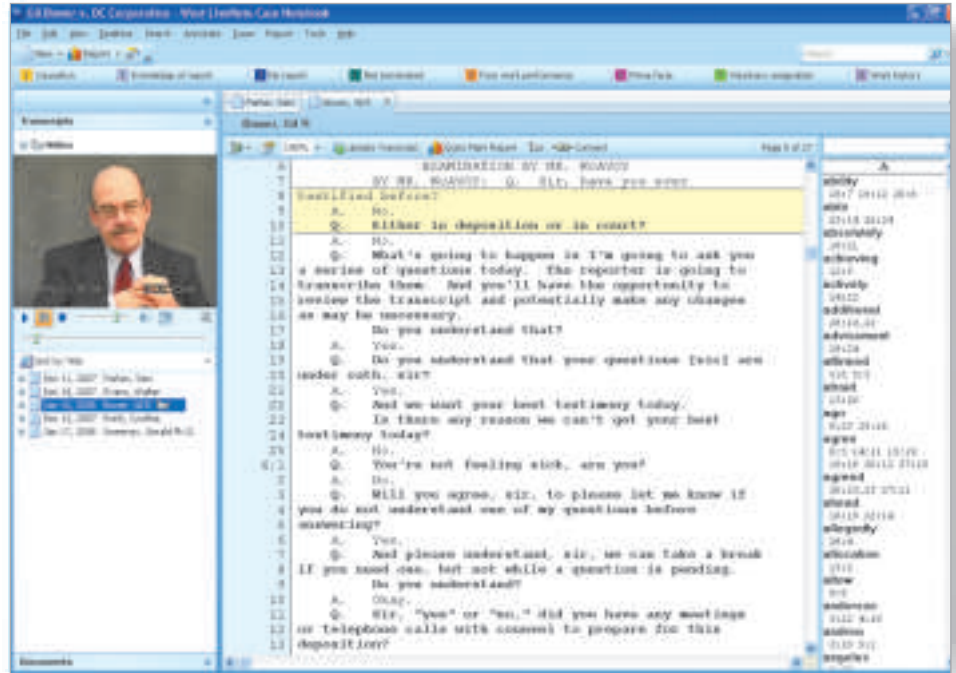

LiveNote Remote Video Sharing hosts compressed .wmv files to optimize the quality of streaming playback while minimizing the bulk. Our service teams are available to professionally sync and encode your video files.

Converting Existing Media

LiveNote Video Services can convert .mpeg and other file formats to low bandwidth .wmv files for upload to LiveNote Remote Video Sharing.

Planning to Store Upcoming Deposition Video Files

When you book your court reporting and videography services through West Court Reporting Services,SM your project manager can ensure the final deliverables are properly formatted for storage in LiveNote Remote Video Sharing. From recording the event, to synchronizing the text and video, to linking your LiveNote or West Case Notebook case to LiveNote Remote Video Sharing, West Court Reporting Services can do it all for you.

The end-user experience remains unchanged with LiveNote Remote Video Sharing.
